Founded: **1966**
Number Employees: **150**

2. Key Competencies

The main Keywords of ICS are:

Software - Safety - Security

We can support our customers with a 360-degree approach for the development of products (System and Software). 360 degree means, we can perform all necessary tasks **from architecture till approval**, during the complete development Process (e.g. V-Modell). Our focus is mobility (railway) and industrial engineering.

Inside the industry sector our focus is handling of all kinds of logistical issues, e.g. trac of the production material flow, mobile applications to optimise production processes.

In the railway industry we work for the signalling and railway infrastructure companies as well as for rolling stock manufacturer.

Due to an increasing interconnectedness of sub-systems and systems rises the hazard of unauthorised access to systems. Based on the EU- General Data Protection Regulation (GDPR), the IT-Security Act and the KRITIS-Decree, ICS hat extended the business activities regarding security consulting.

3. Key features of the product / service portfolio

In addition to the former described competencies, we have a strong focus on all IT and OT security related issues. We have developed a method to analyse and protect an asset as a digital twin. The key function is a complete and automated Cyber-Security-Risk-Analylis (SRA), regarding IEC62443 or ISO 27005.

The used method is developed by us und certified by Bureau Veritas.
