

inventied GmbH, founded in 2021 by four engineers, is an innovative startup based in Rockenhausen, Germany. The company specializes in improving disaster protection through the development of specialized trailer systems like the Vario-Load-Pump and Vario-Load-Rescue. These systems enhance efficiency, ergonomics, and safety in rescue operations, particularly suitable for civil protection and disaster management tasks such as flood response and forest fire fighting.

Our products are characterized by special features such as:

- Versatility and Adaptability: Products designed for various disaster scenarios, developed from practical experience
- Quality and Reliability: Components sourced from recognized manufacturers Made in Germany
- Quick Availability and Easy Handling: Crucial for disaster response.

Our field of activities is, for example:

The Vario-Load-Rescue designed to secure damaged buildings and construct temporary support structures using scaffolding materials, providing stability in emergency and disaster-response situations. The Vario-Load Pump, in contrast, is a comprehensive system for transporting water over long distances, making it ideal for firefighting applications, including wildfire suppression. It includes not only pumps but also hoses, cables, distributors, and other essential accessories, ensuring efficient and flexible water distribution in challenging environments.

inventied is also developing Co-invent, an innovation platform for authorities and organizations with security tasks. This platform serves as a hub for emergency responders to submit innovative ideas for more efficient disaster management. Selected ideas are developed iteratively with the emergency responders, creating prototypes and refining them into market-ready products.
